

Postdoctoral position in the Hutchinson Lab at Northeastern University

The Hutchinson Lab of Cognitive Neuroscience at Northeastern University (www.northeastern.edu/hutchinsonlab/) is looking to hire a post-doctoral fellow with a starting date in the fall (on or around 9/1/2017). Broadly speaking, the lab is interested in how memory influences, and is influenced by, selective attention with a focus on using behavioral and neuroimaging techniques (e.g. fMRI). The fellow will work with the PI in developing a research program reflective of mutual research interests in memory and attention. The fellow is expected to independently manage and execute the research program as well as provide supervision and mentorship to junior lab members as needed.

Qualifications:

Applicants should possess a PhD degree or equivalent in psychology, neuroscience, computer science, or a related field by the time of employment and be eligible to work in the United States. Evidence of an existing, well-developed, and topically related research program is essential and past work with neuroimaging data (in particular fMRI) is especially valued. Prior experience with programming (MATLAB, Python, R) and fluency in statistics with a focus on empirical data analysis is also strongly desired.

The position is for up to two years with the possibility of extending beyond that.

If interested, please send along a copy of your CV as well as a description of your research interests and experience to Dr. J. Benjamin Hutchinson (b.hutchinson@northeastern.edu).
